American Society of Safety Engineers

Professional Development Conference June 9-12, 2008

Session No. 101G

BASIC SAFETY

MANAGEMENT' ELEMENTS

Joel N. Tietjens, CSP, CSHM President T-JENS & T-JENS, INC.

BASIC ELEMENTS

BASIC SAFETY MANAGEMENT ELEMENTS

BASIC ELEMENTS

What are the elements that make up an effective basic safety management plan?

- Management/Policy
- Recordkeeping
- Loss Analysis
- Safety & Health Education/Training
- Safety & Health Inspections/Surveys
- Accident/Incident Reporting & Investigations
- Plan & Programs Review

- The employer has the responsibility of providing a workplace free of any recognized hazards
- A successful safety management plan must rest on a solid foundation of management commitment and support

- Is there a difference between commitment and support?
- Commitment
 - To pledge or assign to some particular course or use
- Support
 - To provide resources
 - Uphold, advocate, champion

 Management must thoughtfully and thoroughly develop a <u>safety and health policy</u> that can be <u>understood</u>, <u>believed</u> and <u>sets</u> the tone for action.

- Does management understand what the policy means?
- The policy should be short, sweet, and to the point. Preferably approximately a half page.
- To be effective, management must establish challenging (realistic) goals for that particular organization/industry.

- Must assign responsibility (with authority) and hold accountable personnel for implementing the plan
- Must participate in safety forums, meetings, educational processes
- Management must "walk the talk"

- What records should be retained and why?
- Occupational Safety & Health Administration (OSHA) requires that employers with more than ten (10) employees maintain records.

 If the employer has ten (10) or less employees, they must maintain records if they have been requested to participate with the Bureau of Labor Statistics (BLS) in their annual survey of occupational illnesses and injuries.

- Records serve as a source of support for managing the safety management plan. May be beneficial in strengthening other safety management programs. Loss/trend analysis
- Records can serve as support during legal or other evidentiary proceedings.

Management should determine what records should be retained and for what period of time. For example:
 OSHA requires OSHA 300 Logs be retained for a period of five (5) years, plus current year.
 Management should designate a person(s) to maintain what records and where.

- Records kept should be
 - OSHA 300, Log of Work-Related Injuries and Illnesses
 - OSHA 300A, Summary of Work-Related Injuries
 and Illnesses

- Accident/incident reports & investigations (OSHA 301, Injury and Illness Incident Report)
- State reports
- First aid

- Property damage/losses
- Liability losses
- Motor vehicle liability/damage/losses/ maintenance
- Security losses
- Inspections/surveys
- Safety meetings or other related meetings

- Education/training records
- Equipment inspection/maintenance
- What retention period for each would be sufficient?
- What other records should be retained?

- What is loss analysis?
- The means of studying statistical data (favorable and/or unfavorable) to determine trends or identify problem areas
- Why do loss analysis?
- Mistakes or errors result in damaged products, production delays, or employee accidents/incidents that effect profit

- Two (2) basic types
 - Trend
 - Job Safety Analysis (JSA)

• Trend

- Used to identify trends indicated by statistical data gathered from other program components
 - Accident/incident data
 - Inspection/survey data
- Indicate where problem areas exist and where to allocate limited resources

- Conducting a Trend Analysis
- Select the data to be analyzed
 - Injury, inspection/survey, etc. data
- Determine time period
 - Monthly, quarterly, annually
- Identify similarities
 - Injuries, job functions, etc.
- Develop corrective actions

- Job Safety Analysis (JSA)
 - Identifying the hazard associated with a job task and applying measures to protect the employee(s) or to eliminate or control (minimize) the hazard

Solutions could include

- Physical changes
 - Machine guards, process layout, etc.
- Change in procedures
 - The way the job is performed, etc.

- Management should designate a person(s) responsible for conducting the analysis
- Including time frames and job tasks

SAFETY & HEALTH EDUCATION/TRAINING

SAFETY & HEALTH EDUCATION/TRAINING

EDUCATION/TRAINING Safety20

- Safety & health education/training is provided to minimize and/or eliminate unsafe acts (behaviors) while performing tasks
- Used to identify hazards involved in tasks, as well as, procedures to avoid them

EDUCATION/TRAINING Solection

- Who should receive education/training?
- Management
 - Line
 - Middle
 - Senior

EDUCATION/TRAINING Salety 2008

- Employees
 - New hires
 - Transferred
 - Continual
 - Temporary
- Contractors?

EDUCATION/TRAINING Safety20

- How often should education/training be provided?
- Depending on the complexity of the subject and regulatory requirements
 - Quarterly
 - Semi-annually
 - Annually
 - Bi-annually
 - Tri-annually

EDUCATION/TRAINING

Seven (7) Steps to Education/Training

- 1. Determine if education/training is needed to solve the problem
- 2. Identify the education/training need
- 3. Identify the goals and objectives
- 4. Develop learning activities
- 5. Conduct the education/training
- 6. Evaluate education/training effectiveness
- 7. Improve the process

- All training should be properly documented
- Who conducts the education/training process?

SAFETY & HEALTH INSPECTION/SURVEYS

SAFETY & HEALTH INSPECTIONS/SURVEYS

INSPECTIONS/SURVEYS

- Inspections and surveys can be a <u>proactive</u> tool in identifying hazards and behaviors before the losses occur.
- Inspections and surveys can also be a <u>reactive</u> tool, such as a thorough inspection after an accident or incident has occurred to determine what else could go wrong.

INSPECTIONS/SURVEYS

- Daily
- Weekly
- Monthly
- Quarterly
- Semi-annually
- Annually

- Special needs, i.e., plant turnarounds, non-routine activities, etc.
- Follow-up
INSPECTIONS/SURVEYS

• Who should do the inspections/surveys?

- Employees
- Line managers
- Mid managers
- Safety & health staff
- Safety committee
- Insurance carrier
- Who else?

INSPECTIONS/SURVEYS

- Inspections/surveys should be properly documented
 - Checklists
 - Narratives
 - Follow-ups

ACCIDENT/INCIDENT REPORTING & INVESTIGATIONS

ACCIDENT/INCIDENT REPORTING & INVESTIGATIONS

ACCIDENT/INCIDENT

- Why report and investigate?
- Determine the cause
- Uncover indirect incidents causes
- Prevent similar incidents
- Document facts
- Cost information
- Promote safety & health
- Fact Find <u>NOT</u> Fault Find

ACCIDENT/INCIDENT

- Items to identify
 - Reporting requirements and procedures for both the employer and employees
 - Training?
 - Personnel responsible for investigations
 - Who should investigate?
 - Guidelines for how to conduct a thorough investigation
 - Training?

PLAN & PROGRAMS AUDIT/REVIEW

- The purpose of auditing or reviewing the safety management plan and its programs is to keep it working efficiently and effectively in preventing accidents, injuries, and other losses.
- Does the plan and its programs keep pace with the ever changing operating environment?

- Determine who will conduct the audit/review
 How often will the audit/review be conducted?
 - At least annually

Documentation

• All audits/reviews should be properly documented with the findings and the necessary actions to be taken.

OCCUPATIONAL HEALTH & SAFETY MANAGEMENT SYSTEMS

ANSI/AIHA Z10-2005 OCCUPATIONAL HEALTH & SAFETY MANAGEMENT SYSTEMS

ANSI/AIHA Z10-2005 ELEMENTS

- 1. Scope, Purpose, Application
- 2. Definitions
- 3. Management Leadership & Employee Participation
- 4. Planning
- 5. Implementation & Operation
- 6. Evaluation & Corrective Action
- 7. Management Review
- 8. Appendices

OHSAS 18001 OCCUPATIONAL HEALTH & SAFETY ASSESSMENT SERIES

OHSAS 18001 ELEMENTS Safety 200

- 1. Scope
- 2. Reference publications
- 3. Terms & definitions
- 4. OH&S management system elements
 - General requirements
 - OH&S Policy
 - Planning
 - Implementation & operation
 - Checking & corrective action
 - Management review

ILO-OSH 2001 GUIDELINES FOR OCCUPATIONAL SAFETY& HEALTH MANAGEMENT SYSTEMS

ELEMENTS OF ILO-OSH 2001

- 1. Objectives
- 2. National framework for OHS-MS
- **3.** Policy
 - Organizing
 - Planning & implementation
 - Evaluation
 - Action for improvement

VOLUNTARY PROTECTION PROGRAM

VOLUNTARY PROTECTION PROGRAM

ELEMENTS OF VPP

- **1.** Management Leadership and Employee Involvement
- 2. Worksite Analysis
- 3. Hazard Prevention and Control
- 4. Safety and Health Training

SEVEN GUIDING PRINCIPLES

SEVEN GUIDING PRINCIPLES TO INTEGRATED SAFETY MANAGEMENT (ISM)

1. Workforce Responsibility and Accountability Line management is responsible and accountable for the protection of employees, the public, and the environment. Everyone is responsible and accountable for the safe conduct of their activities.

2. Clear Roles, Responsibilities and Authorities

• There are clear roles and lines of responsibility, authority, and accountability at all levels of the organization to ensure protection of employees, the public, and the environment.

- 3. Competence Commensurate with Responsibilities
 - All employees have the experience, knowledge, skills, and abilities needed to perform their work safely and competently.

4. Balanced Priorities

Management will allocate resources to address safety, programmatic, and operational considerations. No work will be performed unless it can be performed safely.

5. Identification of ES & H Standards and Requirements

 Hazards shall be evaluated and appropriate controls implemented before work is performed to provide adequate protection to employees the public, and the environment.

- 6. Hazard Controls Tailored to Work Being Performed
 - Engineered and administrative controls shall be in place to prevent and control work-associated hazards.

7. Work Authorization

- No work will be performed unless it can be shown to be done safely.
 - U. S. Dept. of Energy

CORE FUNCTIONS

• Define the Scope of Work

 Missions are translated into work, expectations are set, tasks are identified and prioritized, and resources are allocated

 Analyze the Hazards
 Hazards are associated with the work identified, analyzed, and categorized

Develop and Implement Hazard Controls

 Applicable standards and requirements are identified and agreed-upon, controls to prevent/mitigate hazards are identified, the safety envelope is established, and controls are implemented

- Perform Work Within Controls
 - Readiness is confirmed and work is performed safely

Provide Feedback and Continuous Improvement

Feedback information on the adequacy of controls is gathered, opportunities for improving the definition and planning of work are identified and implemented, line and independent oversight is conducted, and, if necessary, regulatory enforcement actions occur

IN SUMMARY

IN SUMMARY

IN SUMMARY

- To create an effective basic safety management plan, the organization must have these elements
 - Management/Policy
 - Recordkeeping
 - Loss Analysis
 - Safety & Health Education/Training
 - Safety & Health Inspections/Surveys
 - Accident/Incident Reporting & Investigations
 - Plan & Programs Review
